Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

10 20 30 40 50

Output: 10 20 30 40 50

Answer

```
// You are using GCC
```

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
struct node
```

```
{
```

```
    int data;
```

```
    struct node * next;
```

```
    struct node * prev;
```

```
};
```

```
typedef struct node node;
```

```
node * head=NULL;
```

```
void insert(int data)
```

```
{
```

```
    node * temp=(node *)malloc(sizeof(node));
```

```
    temp->data=data;
```

```
    temp->next=NULL;
```

```
    temp->prev=NULL;
```

```
    if(head==NULL)
```

```
    {
```

```
        head=temp;
```

```
}  
else  
{  
    node * a=head;  
    while(a->next!=NULL)  
    {  
        a=a->next;  
    }  
    a->next=temp;  
    temp->prev=a;  
}  
}
```

```
void display()  
{  
    node * a=head;  
    while(a!=NULL)  
    {  
        printf("%d ",a->data);  
        a=a->next;  
    }  
    printf("\n");  
}
```

```
int main()  
{  
    int n;  
    scanf("%d",&n);  
  
    int b;  
    for(int i=0;i<n;i++)  
    {  
        scanf("%d",&b);  
        insert(b);  
    }  
    display();  
}
```

Status : Correct

Marks : 10/10
